

Brittany Larson

Designed and implemented a fully automated, end-to-end recruiting system by connecting AI and five integrated tools to eliminate manual work from the first HM intake call through interview scheduling.

Post-call processing reduced to under 60 seconds

5 tools

Connected into one automated workflow

0 manual

Data entry after any intake or screening call

100%

Consistent quality across every candidate submittal

THE PROBLEM

Recruiting at scale means drowning in repetitive manual tasks. After every HM intake call, notes are scattered. After every screening, data has to be entered field by field. Summaries get written from scratch, quality varies, and scheduling means another round of back-and-forth.

The result for clients: **slower pipelines, inconsistent candidate presentations, and a recruiter spending more time on admin than on talent strategy.**

THE SOLUTION

A three-module AI system that handles everything automatically. Every candidate gets the same high-quality treatment. Every HM receives a consistent, structured submittal. Every step is documented in one connected system with zero manual data entry.

3-MODULE SYSTEM

1

Intake Call Automation

After each HM intake call, Claude pulls the Grain transcript and fills all 26 fields in a custom Airtable Intake Notes table, replacing 20 to 30 minutes of manual note-taking with a zero-touch process. Role requirements, candidate profile, comp range, and sourcing strategy captured instantly.

Grain Transcription Airtable Auto-fill
26 Fields Captured

2

Candidate Screening and Submittal

Candidates book via Calendly with Google Meet auto-generated. Claude pulls the resume from Gmail before the call, Grain records and transcribes it, and Claude creates the Airtable record and a full HM-ready summary: overview, highlights, concerns, interview focus areas, and a recommendation.

Resume Auto-pull Transcript Extraction
Structured HM Summary

3

Interview Scheduling

One instruction triggers everything. Claude checks both calendars, builds a branded Google Meet invite with the HM LinkedIn linked and resume attached, then sends it to all parties instantly. No back-and-forth, no manual formatting.

Calendar Check Auto Invite Resume Attached

End-to-End Workflow

Brittany Larson

From first HM conversation to interview on the calendar, every step automated

HOW IT WORKS

PHASE 1 HM INTAKE

- Role details, ideal candidate, comp range, and sourcing strategy all captured in Airtable

PHASE 2 CANDIDATE IN

- Pre-call brief sent to recruiter so candidate background is ready before the call starts

PHASE 3 SCREENING

- Summary includes overview, highlights, concerns, interview focus areas, and resume, batched into the submittal email

PHASE 4 SCHEDULING

- Manual touchpoint
- Fully automated by Claude + Zapier

WHAT HIRING MANAGERS GET

- **Consistent, structured submittals** every time with no variation in quality or format regardless of role or volume
- **Interview focus areas** tailored to each candidate so HMs walk in prepared and asking the right questions
- **Faster time to submittal** so candidates move through the pipeline in hours, not days
- **Resume always attached** to every interview invite so nothing falls through the cracks

WHAT THIS MEANS AT SCALE

- **Same quality output** managing 2 roles or 20. The system does not slow down as volume grows
- **Zero data entry errors.** Everything extracted directly from a recorded source of truth
- **Full intake capture** in a 26-field database with no knowledge lost between the HM call and first screen
- **Recruiter time shifts to strategy**, building relationships and closing candidates faster
